

Technofast Demo Kit

Technofast Demo Kits have been produced to demonstrate to potential customers and end users to show how the simplistic and ease of operation of the **HydraNut**, **HydraJac** and **CamNut** can be used.

Features:

This **Demo Kit** is equipped with everything you will need to show to the customer. It also includes hand pump and hoses with CEJN 116 quick connect couplings.

The *standard* demo kit comes in an orange pelican case (as it is shown in the picture).

We can also offer an *optional* kit with pelican case with wheels and pull handle. This has a larger case size to house HydraJacs separate to avoid transit damage. This is the best option.

Operational Guidelines

Please note that this kit is for demonstration purposes only and is not to be pressurised over 250 Bar maximum with 150 Bar being sufficient pressure to clearly demonstrate the operation of the tools.

Extreme caution should be taken when loading the tools to avoid over pressurisation or to over extend the tensioners, which could result in damage to the kit or personal injury.

The purpose of the gauge is purely to demonstrate pressure being applied, not to indicate any implied load.

When the demonstration is complete ensure that the tools are returned to the closed position.

Only competent trained operators should be allowed to use this equipment.

Technofast Industries Pty Ltd takes no responsibility for improper use of this equipment.
